

Homo Faber VS Animal Laborans

Homo Faber Animal e Laborans
sono due figure dell'essere
umano (donna e uomo) al
lavoro...

Hannah Arendt e Richard Sennet

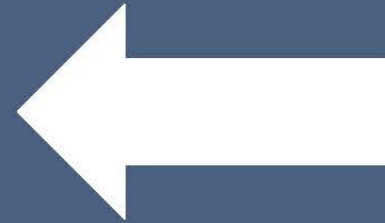

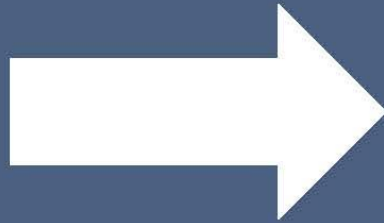

Animal Laborans è una persona che fatica e produce ed è concentrato sul raggiungimento di un obiettivo, l'unica domanda che si pone è come fare funzionare il meccanismo per raggiungere l'obiettivo finale...

Robert Oppenheimer / Adolf Eichmann

Homo Faber è una persona che lavora un creatore ed è concentrato sullo sviluppo di un "processo integrato" cercando di armonizzarne gli aspetti diversi ponendosi la domanda del perché fa una determinata azione...

City Makers Agenda

Citymaking in 2016 and beyond.

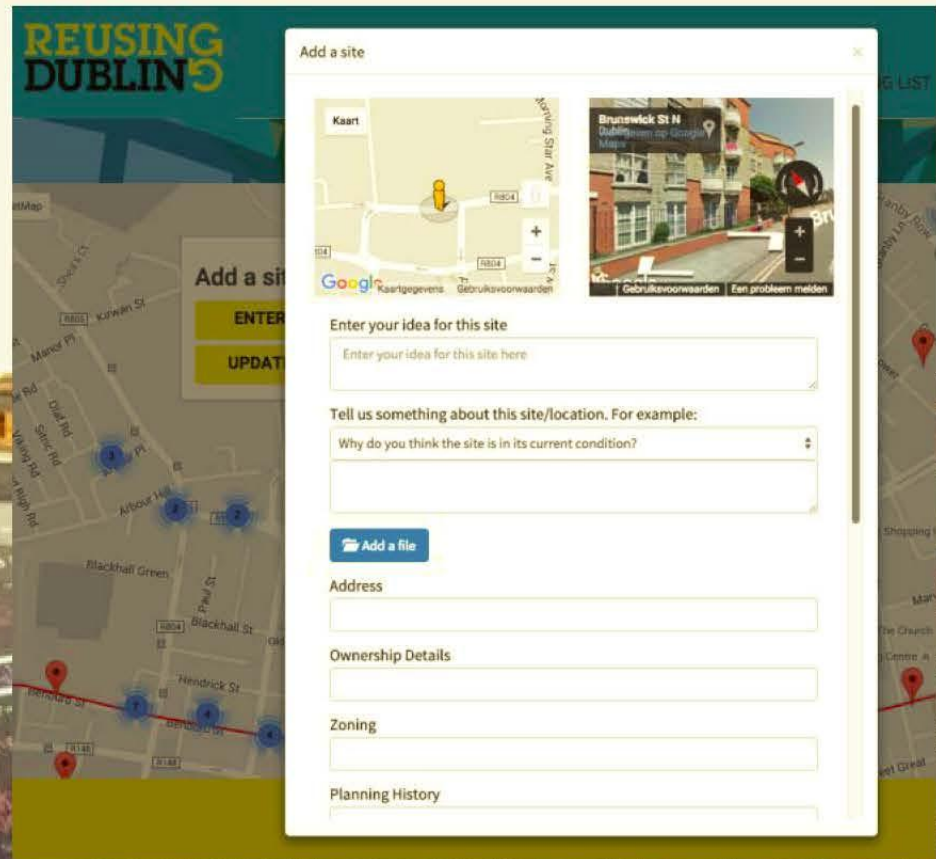

Over the past couple of years, the City Makers movement has been taking off. You find City Makers everywhere, people who singlehandedly initiate change in their urban surroundings and contribute to the public cause. Citizens in different countries and contexts are inspired, either out of dissatisfaction or a strong believe in local social innovation, to take ownership over the liveability of their neighbourhoods and cities. This is a shift taking place all across Europe.

Layers of the city

The historic urban landscape is the result of the layering and intertwining of cultural and natural values over time. Beyond the notion of 'historic centre,' it includes the broader urban context and its geographical setting.

CULTURAL PRACTICES

BUILT ENVIRONMENT

TOPOGRAPHY

INFRASTRUCTURES

DIVERSITY AND IDENTITY

OPEN SPACES

SOCIAL VALUES

How can a city become a stable ecosystem?

How can future generations be engaged in maintaining the continuation of urban life?

How can action and planning law work together in order to achieve climate-resilience for cities?

GEOMORPHOLOGY

Can urban conservation serve the needs of local communities, including the poor and the marginalized?

HYDROLOGY

Can we sustain and enhance the identity of cities as a way to brand them?

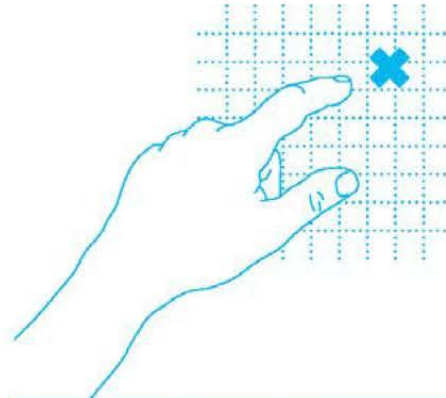

Which new financial tools are needed for the management of the historic urban landscape?

How can urban conservation promote new forms of productivity and socio-economic development?

The historic urban landscape approach in action

1. Undertake a full assessment of the city's natural, cultural and human resources;
2. Use participatory planning and stakeholder consultations to decide on conservation aims and actions;
3. Assess the vulnerability of urban heritage to socio-economic pressures and impacts of climate change;
4. Integrate urban heritage values and their vulnerability status into a wider framework of city development;
5. Prioritize policies and actions for conservation and development, including good stewardship;
6. Establish the appropriate (public-private) partnerships and local management frameworks;
7. Develop mechanisms for the coordination of the various activities between different actors.
